

I am against Docket 03-104.. As has been proven in the trials of PLC technology in other countries, PLC will cause unacceptable levels of interference to existing infrastructure and Amateur Radio operations. In a time when communications is paramount to national security the application of a technology which will render HF low band and high band operations useless for all groups using those bands. I am not willing to support this technology. I would believe that Homeland Security would come first and with the evidence from other tests performed in other countries and the current test data collected in our country, this request of Broadband over Power Line would be denied. Thank You
